Reporting and Insights with CommVault® Simpana® Software

Achieve Operational Excellence

Access to actionable information is the key to informed decision making and operational excellence. To achieve this, Simpana® software has robust, built-in reporting analytics to enable the delivery of IT as a Service; infrastructure cost planning, insight into operations and simplified compliance audits. Simpana software provides unique software with deep operational reporting integrated into both archive and backup operations

Dashboard and Instrumentation Level Reporting

Global reporting for a rich understanding of operations with deep views into data, usage and environmental characteristics. Live instrumentation and dashboard views to provide summary and analytic views of utilization, success rates and a host of other parameters designed simplify data management.

Chargeback and SLA Reporting

Chargeback reporting to simplify and accelerate the management of large scale shared services infrastructures. SLA Attainment Reporting options to enable the shift to true services driven IT

Run Trending, Health Check Analysis and Compare to Best Practices

Historic trend reporting can be key to long term optimization of the operating environment. Simpana software delivers a host of analytical reporting options designed to

Mobile Monitoring and Reporting

CommVault Simpana software comes with a mobile app for iOS, Android, and Windows Mobile devices. Monitor data management tasks from anywhere in the world. Intuitive graphical display of the CommVault environment gives mobile users an 'at-a-glance' view of real time operations status.

KEY CAPABILITIES AND BENEFITS

Dashboard Views	Intuitive summary reporting of status of the data management environment. Report on conditions in the infrastructure (across physical and virtual) as well as data management tasks.
Live Instrumentation Reports	Detailed instrumentation level reports allow admins a detailed drill-down view into operational parameters like deduplication, storage utilization, network traffic and host of other parameters.
Mobile App	Access reports and monitor status of the CommVault Simpana environment from anywhere on any device. CommVault Monitor App supports iOS, Android and Windows Mobile devices.
SLA Reporting	Make the shift to service-based IT. Report on SLA success and attainment. Great for shared services and cloud provider solutions where SLA attainment and reporting is critical business success.
Trend Analysis	Perform historical analysis and comparison of trends. Really useful from troubleshooting changes in the environment. Go beyond simple job histories to trends in the infrastructure across physical and virtual resources.
Health Check and Best Practices Reports	Achieve real operational excellence with health check analysis designed to provide insight into the health of the overall environment. Compare current and historical trends to known best practices to help you tune and optimize your operating environment.
Chargeback Reporting	Detailed chargeback reports particularly useful for multi-tenant environments. Provide chargeback to either internal departments or end customers. Tie chargeback reporting to SLA reports for a true service-based delivery model.
